Education

University of Victoria

Bachelor of Software Engineering

Victoria, BC

Sep. 2021 - Aug. 2026

- **Relevant Coursework:** Software Architecture, Software Testing, Algorithms & Data structures, Databases, Security Engineering, Data Mining, Requirements Engineering, Computer Networks.

Technical Skills

Languages: TypeScript, Java, Python, C#, Go, PHP, SQL

Frameworks: Next.js/React, React Native, Angular, Django, .NET, Ionic, Prisma, GraphQL

Developer Tools: Git, Docker, Linux, Cursor, Arduino, Raspberry Pi, Linear, PostgreSQL, MongoDB, UML, MIRO

Work Experience

Software Engineer

Primer

April. 2025 – Aug. 2025

San Francisco, CA

- Took ownership of multiple 0-1 projects across full stack web and mobile, built with **Next.js** and **React Native**
- Shipped over 100,000 lines of code over the internship, releasing on a weekly cycle to meet ambitious goals
- Thrived in a high-performance startup environment, extending weeks to over 60 hours to push aggressive deadlines and deliver high-quality software

Full Stack Developer

Schneider Electric

May 2023 – Sep. 2023

Victoria, BC

- Developed an electrical monitoring web app using the **.NET** framework with **C#**, ensuring the safety of client facilities by delivering metric reports, warnings, and performance improvement suggestions.
- Collaborated with an **Agile** team using **Jira** to prioritize development tasks, improving project delivery times through effective sprint planning.

Internal Applications Developer

Searchspring

Mar. 2021 – Sep. 2021

Victoria, BC (Remote)

- Developed an automated deployment system to streamline product releases using **Go** and **Typescript**, reducing deployment time and complexity by over 90%.
- Built an interactive Organization Chart using **React** and Chart JS, enhancing cross-team communication and increasing company-wide visibility of team structures.

App Developer

Tesla

Sep. 2020 – Dec. 2020

Victoria, BC (Remote)

- Modernized a legacy design tool by transitioning from a command-line interface to a desktop app using **Angular** and **Ionic**, improving usability and reducing design iteration cycles by 95%.
- Collaborated with mechanical engineers to gather requirements and brainstorm new features, ensuring weekly updates met stakeholder expectations.

Projects

Head of Software | UVic AERO Team

Sep. 2024 – Present

- Managed a team of 5 developers to build flight software for an urban firefighting drone to autonomously navigate indoor spaces and extinguish fire targets.
- Developed a flight simulation system using **Docker** to emulate our drone's hardware, allowing the software team to shorten our testing cycle from days to minutes and significantly reducing risk to our vehicle.

Software Developer | UVic Rocketry Team

Jan. 2023 – May 2023

- Developed and tested a Ground Support System using **React**, **Mongo DB**, and **Python** to track rocket telemetry and simulate flights, contributing to the team's first successful supersonic launch.
